**Subject:** Notice in Accordance with TSCA Section 8(e): Results of an acute toxicity study in  
Chironomus (*Chironomus riparius*) with an experimental pesticide

Dear Section 8(e) Coordinator:

[REDACTED] is submitting results of an acute toxicity test with [REDACTED] in  
Chironomus (*Chironomus riparius*), conducted by [REDACTED] (NON-GLP  
Indicator Study). The test substance is an experimental pesticide.

The test was conducted in a static system) over 48 hours in line with the following test guidelines:  
"OECD Guideline for Testing of Chemicals, No. 235 (adopted July 28, 2011): *Chironomus* sp.,  
Acute Immobilisation Test)"

The following nominal concentrations were tested: **Solvent control, 0.05, 0.5 and 5 µg /L**

All test solutions were visibly clear over the entire exposure period.

The test substance is an active ingredient. Analyses were not carried out.

The following effect concentrations (µg/L) were obtained:

**EC<sub>50</sub> (48 h) = 0.04 µg/L**

Explanation:

The **NOEC** is the highest concentration tested with no statistical significant deviation compared to  
the control

The **EC<sub>50</sub>** is the concentration calculated at which 50% of the animals were immobile.

Note that different statistical methods are used for evaluation of the parameters **NOEC** and **EC<sub>50</sub>**.  
This might result in **EC<sub>50</sub>** values lower than the **NOEC**.
